SUMMARY

Senior Software Engineer with 7+ years delivering client-facing, regulated clinical-trial software with C#.NET, React, SQL Server, and AWS. Trusted with end-to-end full-stack feature delivery, production-critical problem solving, technical design, code quality, and mentoring engineers.

CAREER HIGHLIGHTS

2 IQVIA PROMOTIONS | OVATION AWARD & 3 RECOGNITIONS | 2 ENGINEERS MENTORED | 6 YEARS OF STRONG REVIEWS

CORE TECHNOLOGIES

Engineering: C#, JavaScript, .NET, Entity Framework, React, REST APIs

Data: SQL Server, PostgreSQL, schema design, stored procedures

Cloud & Delivery: AWS (S3, Lambda, RDS), TeamCity, Octopus Deploy, Git, GitHub, Bitbucket, Postman, Jira

Quality & AI: NUnit, Jest, unit and integration testing, Cursor, GitHub Copilot, Claude

PROFESSIONAL EXPERIENCE

IQVIA | Senior Software Engineer

JUL 2019 - PRESENT

Frederick, MD

Career progression: Engineer I (Jul 2019-Oct 2021) | Engineer II (Oct 2021-Oct 2025) | Senior (Oct 2025-Present)

Develop client-facing CompleteConsent/eConsent software that helps life-sciences organizations streamline clinical-trial operations.

SELECTED ENGINEERING PROJECTS

Bulk Site Access Provisioning: Delivered SQL Server, C#.NET REST API, and React UI components for spreadsheet-based bulk site-staff access management, replacing a manual provisioning process.

Enterprise User & Group Administration: Designed database schemas and developed API and React UI components with the team for enterprise administration, enabling clients to manage enterprises, users, and groups.

Secure Clinical Trial Site Archiving: Developed database, API, and UI components for a secure workflow that packages site-level clinical-trial data into ZIP archives and delivers them through email and Amazon S3.

AI-Assisted Document Processing (In Development): Designed and implemented a REST endpoint that integrates an existing AI service to parse documents for import, intended to reduce a manual data-entry bottleneck.

Embedded Patient-Provider Video Conferencing: Collaborated on implementation of embedded video conferencing that allows patients to communicate directly with care providers inside the platform.

Secure Clinical Trial Reporting: Contributed to the design and implementation of reporting capabilities that give clients secure access to their clinical-trial data.

LEADERSHIP & RECOGNITION

Own end-to-end feature delivery from design and estimation through implementation, peer review, automated testing, deployment, and production validation, with a strong focus on code quality and reliable delivery.

Served as primary production-support owner across multiple platform versions, performing root-cause analysis and developing two AWS Lambda remediations that restored disrupted integrations.

Mentored two junior engineers, transferred production-support knowledge, and contributed to technical design decisions and peer code reviews.

Received an IQVIA Ovation Award and multiple Impact Program recognitions for collaboration, additional release responsibilities, and contributions to Release 8.0 delivery; consistently rated Exceeds Expectations or higher from 2020-2025.

Independent Software Consultant | Software Engineer

AUG 2020 - PRESENT

Frederick, MD

Design and deliver custom software that replaces manual workflows and supports daily small-business operations.

SELECTED CONSULTING PROJECTS

Digital Box Platform: Built and maintain a production document and shipping-workflow platform using .NET, React, PostgreSQL, and AWS, with authentication, PDF processing, reporting, search, and operational capabilities used in daily client operations.

Customer Service Order Lookup Automation: Built a React-based tool that lets customer service teams check order status across Digital Box exports, in-stock inventory, purchase orders, and ShipStation from a single search.

CSV Product Data Migration: Built a C# utility to reconcile and update CSV product datasets for downstream import and integration.

Web Scraping & Process Automation: Built multiple JavaScript and Puppeteer web scrapers to automate repetitive business processes, including product migration between online marketplaces.
